EXPOSED BURGLAR BARS

These windows are not to be confused with our unique Strongwood windows, in which the burglar guard steel work is totally encased in timber and not visible.

Our exposed burglar guards are made up of 10mm round steel bar, which is welded at each intersection to form a grid. The steel work protrudes through the outer framework, and a "T" piece is welded onto the grid, this results in superior strength to most add on burglar guards fixed with screws.

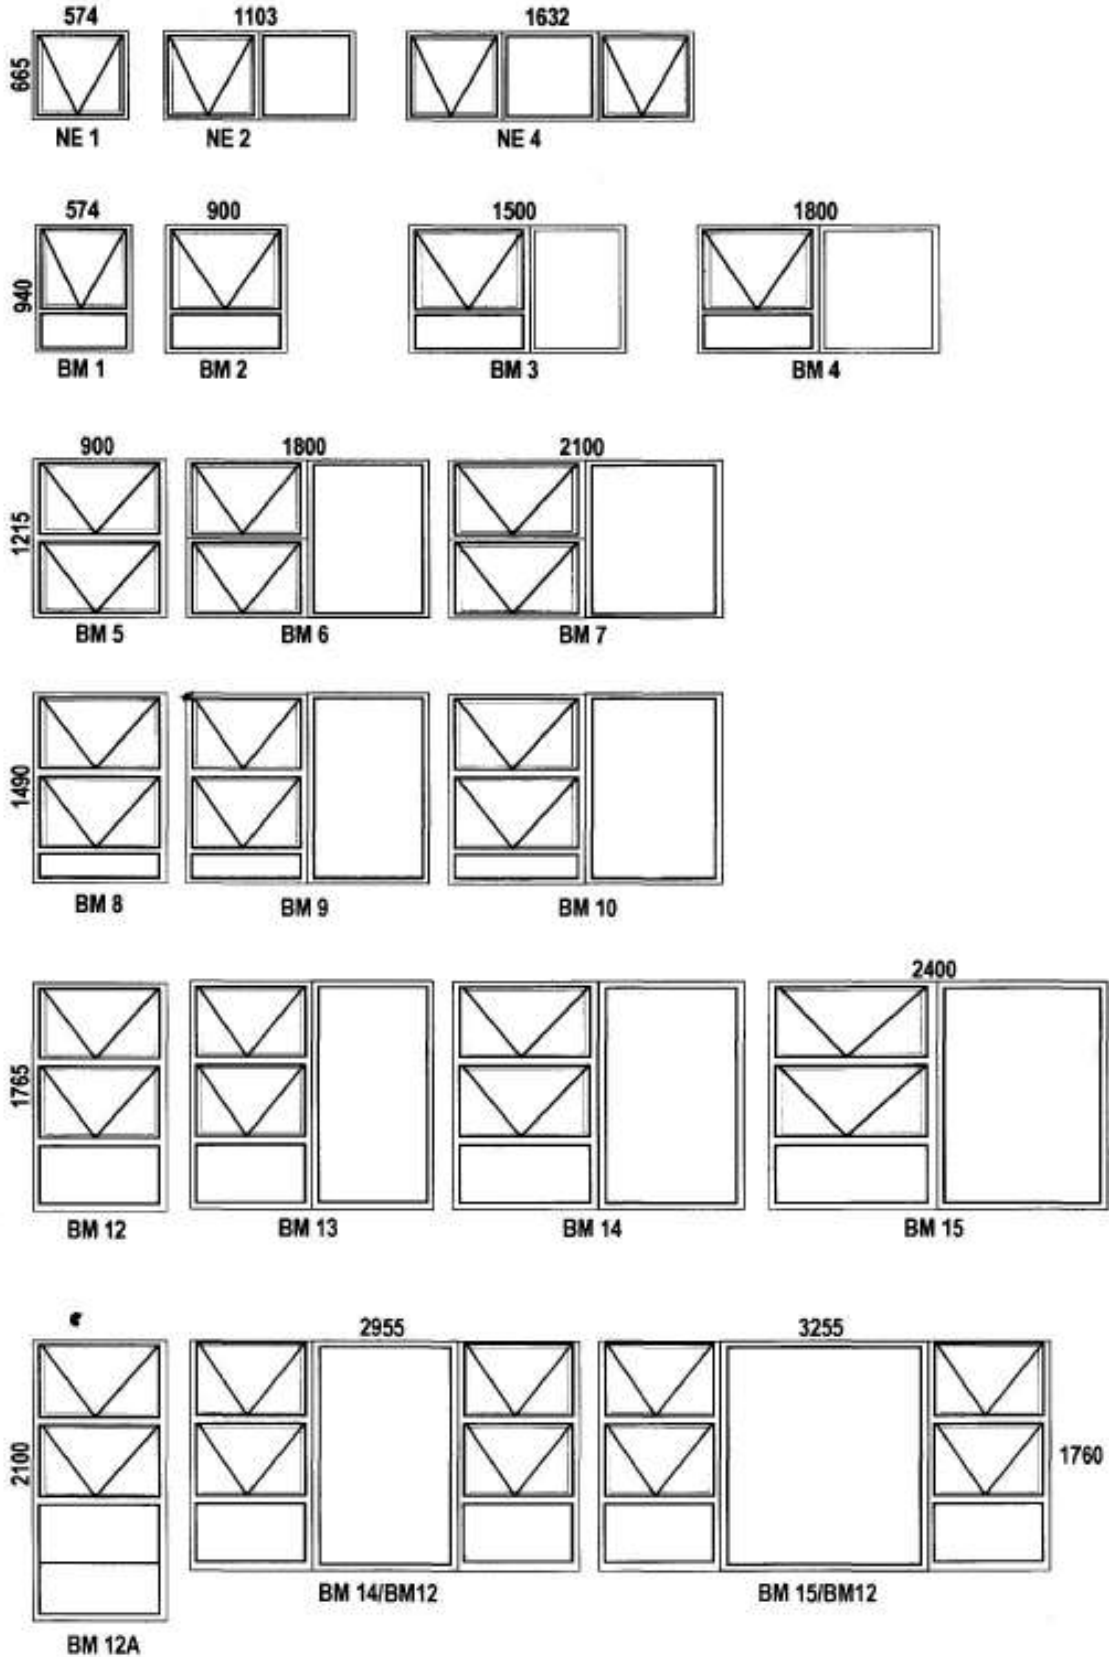

Exposed burglar guards are available with either a paint or galvanized finish and can be factory fitted to any of our standard or purpose made window frames.

SLIDING / FOLDING DOORS

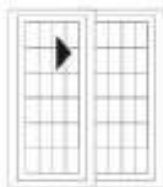

Folding Sliding doors are available in Full Pane, Full Pane with Safety Rail, Cottage Pane & Strongwood. We prefer to use the 866AG system from Hillaldam, as this system allows a weatherproof rebate to be used on the frame - work.

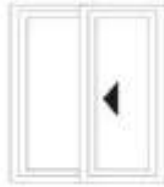

The 866AG system requires that an odd number of leaves fold to either one or both sides. Should you require an even number of leaves, then a single leaf can be hinged to the one side of the unit, with an odd number of leaves stacking to the opposite side.

The leaves must always stack towards the outside of the unit.
